

Table 6: Decision tree hyperparameters settings.

Hyperparameters	Description	Values
<i>criterion</i>	It measures the quality of a split.	gini and entropy
<i>splitter</i>	A strategy that is used to select the split at each node.	best and random
<i>max_depth</i>	The maximum depth of the tree.	[1 - 100]
<i>minimum_samples_split</i>	The minimum number of samples required to split.	[2 - 102] , step = 10
<i>minimum_samples_leaf</i>	The minimum number of samples required to be a leaf node.	[1 - 101] , step = 10
